MicroCLEAN captures small particulate

- Polypropylene microfibers sandwiched between two layers of spunbond polypropylene.
- Strong enough for most applications
- Superior Efficiency
- Good capacity for small particulate.
- Provides the cleanest coolants

MicroCLEAN consists of polypropylene microfibers sandwiched between two layers of spunbond polypropylene. Microclean captures your smallest particles, providing the cleanest possible coolant. The high density of the middle layer limits capacity and MicroCLEAN may not be suitable for very high flow rates.

MC134
4.75 oz./sq.yd.

MicroCLEAN is ideal for filtering coolants used for honing, and polishing when clarity is critical.

Microfibers

Filter cycles often more than double that obtained with SMS filter media.

MicroCLEAN is another superior engineered filter media from DB Filtration.
